## Projects

### Raspberry Pi Web Server

**March 2013**

Program my own web server with a Raspberry pi processor. MySQL, HTML, PHP, and apache were used in order to set up the web server.

### Stereo Matching

**January 2013**

Extraction of 3D information from digital images, and comparison of information about a scene from two vantage points. C and OpenMP were used in order to process the images and come up with the final product.

### Cyber-Energy Operation Management System

**August 2012**

System built to monitor the energy consumption levels on campus. HTML Javascript PHP and C# were the languages used to create the final product
